EDUCATION

Sri Shakthi Institute of Engineering and Technology

Bachelor of Engineering in Computer Science and Engineering (Cyber Security) – CGPA: 7.77

Coimbatore, TN
Sep. 2024 – May 2028

Bannari Amman Vidhya Nikethan Metric Higher Secondary School

HSE – Mathematics and Computer Science – Grade: 75%

Erode, TN
Jun. 2022 – Mar 2024

Bannari Amman Vidhya Nikethan Metric Higher Secondary School

SSLC – Secondary School – Grade: 81%

Erode, TN
Jun. 2014 – Apr 2022

SKILLS

Languages: Python, JavaScript, HTML, CSS

Cybersecurity: OSINT, Burp Suite, Shodan, Nmap, Wireshark, Breach Detection, Phishing Simulation, Social Engineering, Cryptography

Web Security: HTTP/HTTPS, TCP/IP, DNS, WHOIS, Subdomain Enumeration, Web Vulnerability Analysis

Networking & OS: Linux Administration, Networking Fundamentals, Route Tracing

PROJECT

Helios – The Recon Tool [github](#)

- Built a Python CLI OSINT tool that automates email breach checks (HaveIBeenPwned), password exposure lookups, IP geolocation, DNS/WHOIS/subdomain enumeration, route tracing, and Shodan dork searches from a single interface with JSON output.
- Automated OSINT workflows including breach intelligence, DNS/WHOIS analysis, subdomain enumeration, and geolocation lookups, reducing manual reconnaissance effort.
- Technologies: Python, dnspython, python-whois, Shodan API, requests, Linux

Try-Me – Phishing Simulation Lab [github](#)

- Developed a fully local, terminal-based phishing-awareness training app (curses UI) covering email simulation, live phishing page demos, smishing, vishing, and a red-vs-blue-team module – zero third-party dependencies.
- Developed a red-team vs blue-team training module to demonstrate phishing attack techniques and defensive detection strategies in a environment.
- Technologies: Python (stdlib only), curses, HTTP server, Linux/macOS

SELF-DIRECTED TRAINING

Cybersecurity Platforms & CTF Competitions | Sep 2024 – Present

- Hands-on cybersecurity challenges on Hack The Box and CyLab Security Academy, gaining practical experience in Web Security, Linux Administration, OSINT, Networking, and Cryptography.
- Participated in multiple Capture The Flag (CTF) competitions, applying offensive and defensive security techniques for vulnerability assessment, exploitation, and incident analysis in real-world scenarios.

ACHIEVEMENTS

- Completed 107+ cybersecurity challenges on Hack The Box and CyLab Security Academy.
- Participated in multiple CTF competitions, enhancing problem-solving and security analysis skills.
- Developed cybersecurity projects including an OSINT Recon Tool and a Phishing Simulation Lab using Python.
- Gained hands-on experience with tools such as Burp Suite, Nmap, Wireshark, and Shodan through practical labs and security assessments.
